New Mexico Aggregate* Healthcare Provider (HP) Influenza Vaccination Rates
2011-2012 through 2017-2018

Source: NMDOH Healthcare-associated Infections Program – * 33 inpatient healthcare facilities in New Mexico; reporting is voluntary. Healthy People 2020 goal is 90%.
The standardized infection ratio (SIR) is a summary measure used to track infections at the national, state or local level over time. The SIR compares the actual number of infections to the number expected given the standard population (national baseline). A SIR greater than 1.0 indicates more infections than predicted and a SIR of less than 1.0 indicates fewer infections than predicted.

CLABSI - central line associated bloodstream infection

MRSA - methicillin resistant staph aureus
Measles
New Mexico, 1985-2018

Number of cases

1989 - Two dose schedule approved
1991 & 1995 - Documented outbreaks
2007 - 1 imported case at Intel International Science Fair
2011 - 4 sporadic cases (3 were imported)
2012 - 2 siblings in Rio Arriba County with unknown exposure source

Includes confirmed and probable cases, Source: NMDOH Infectious Disease Epidemiology Bureau.

Suicide Death Rates by Census Tract Poverty Level
New Mexico, 2013-2017

Poverty level is the percentage of persons of all ages in the decedent’s census tract living at or below 100% of Poverty. Suicide deaths are defined by ICD 10: X60-X84, Y87.0, *U03.
Rates have been age-adjusted to the standard U.S. 2000 population.
Sources: NMDOH, Bureau of Vital Records and Health Statistics, U.S. Bureau of the Census, American Community Survey
Deaths of despair, also known as deaths from diseases of despair, include deaths from suicide, drug overdose and 100% alcohol-attributable causes. Note that deaths that are 100% attributable to alcohol do not include all alcohol-related deaths. For instance, motor vehicle crashes and liver cirrhosis are often, but not always, attributable to alcohol and are not included in this definition of "deaths of despair."

Rates have been age-adjusted to the standard U.S. 2000 population.

Conclusions

• Health status is strongly inversely associated with poverty at the community level

• Exceptions to this include suicide, older adult falls deaths, and Alzheimer’s disease deaths

• Indicators with greater than twice the risk for persons living in high poverty areas include: teen birth, deaths due to chronic liver disease, cirrhosis, diabetes, alcohol, infectious disease, and influenza and pneumonia
Conclusions

- In general, chronic disease mortality rates continue to decrease in New Mexico
- In general, injury and substance abuse death rates are stable or increasing
- Vaccination continues to reduce infectious disease rates and disparities
- The infant mortality rate reduction in NM is a major success but disparities remain
- Geographic, particularly unfavorable to rural areas, socioeconomic and racial/ethnic disparities persist in NM
