NEW MEXICO INFLUENZA SURVEILLANCE UPDATE
2012 - 2013 Influenza Season

Epidemiology and Response Division, New Mexico Department of Health (NMDOH)

Influenza Activity in New Mexico for Week Ending November 17, 2012 (MMWR Week 46)

Influenza in the State was at low activity by several indicators:

- Outpatient Visits for Influenza-like illness (ILI): twenty-four of the 26 sentinel outpatient provider sites reported a total of 8,597 patient visits, of which 181 (2.1%) were identified as visits for ILI\(^2\). The previous week ending November 10th reported 1.7% influenza-like illness. See graph below displaying the comparison of statewide ILI activity to national ILI activity percentage.

\(^1\) Weekly ILI and lab data may change as additional reports are compiled.

\(^2\) Influenza-like Activity (ILI) is defined as Fever (≥ 100°F [37.8°C], oral or equivalent) AND cough and/or sore throat in the absence of a KNOWN cause other than influenza.
By NMDOH regions within the state (refer to page 4 table footnote defining the regions by county), activity was at low to slightly increased levels with a range of 0.7% ILI (Northeast Region) to 4.2% ILI (Southwest Region). See graph below for the current season’s ILI by region.

- Laboratory tests for influenza: the Scientific Lab Division (SLD) has reported five positive samples for influenza by polymerase-chain reaction (PCR) testing, collected between 11/3/12 and 11/15/12. Two of the positive samples were influenza A type (not subtyped) and four were influenza B type. These samples originated from McKinley, Bernalillo and Santa Fe counties.

- Influenza-related deaths: there have been no reports of deaths, adult or pediatric, caused by lab-confirmed influenza in New Mexico for week ending November 17, 2012.
NMDOH reported the state influenza activity as “**Sporadic**” to the Centers for Disease Control and Prevention (CDC). See the table on page 3 for full definitions of activity levels. Below is a map of the U.S displaying New Mexico activity in comparison to influenza activity in bordering states, regions and nationally. This map is produced by the CDC Influenza Division.

*A Weekly Influenza Surveillance Report Prepared by the Influenza Division*

*Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists* *

**Week Ending November 17, 2012- Week 46**

This map indicates geographic spread and does not measure the severity of influenza activity.

</table>

*Influenza-like illness: Fever (> 100°F [37.8°C], oral or equivalent) and cough and/or sore throat (in the absence of a known cause other than influenza)†

† Lab confirmed case = case confirmed by rapid diagnostic test, antigen detection, culture, or PCR. Care should be given when relying on results of point of care rapid diagnostic kits during times when influenza is not circulating widely. The sensitivity and specificity of these tests vary and the predictive value positive may be low outside the time of peak influenza activity. Therefore, at the start of the season, NMDOH uses lab confirmation by PCR or culture to declare the presence of lab-confirmed influenza in the state. Positivity by other lab methods is recognized and tracked as another influenza activity indicator as the season progresses.

‡ Institution includes nursing home, hospital, prison, school, etc.

**Region: population under surveillance in a defined geographical subdivision of a state. A region could be comprised of 1 or more counties and would be based on each state’s specific circumstances. In New Mexico, the NMDOH regions are: **Northwest Region**—San Juan, McKinley, and Cibola counties; **Northeast Region**—Los Alamos, Rio Arriba, Taos, Colfax, Union, Mora, Harding, Santa Fe, San Miguel and Guadalupe counties; **Metro Region**—Bernallillo, Sandoval, Torrance and Valencia counties; **Southeast Region**—Quay, Curry, DeBaca, Lincoln, Roosevelt, Chaves, Eddy and Lea counties, and **Southwest Region**—Socorro, Catron, Grant, Sierra, Otero, Dona Ana, Luna and Hidalgo counties.
