NEW MEXICO INFLUENZA SURVEILLANCE UPDATE
2012 - 2013 Influenza Season

Epidemiology and Response Division, New Mexico Department of Health (NMDOH)

Influenza Activity in New Mexico for Week Ending December 1, 2012 (MMWR Week 48)

Influenza in the State was at low to moderate activity by several indicators:

- Outpatient Visits for Influenza-like illness (ILI): twenty-five of the 26 sentinel outpatient provider sites reported a total of 8,509 patient visits, of which 183 (2.2%) were identified as visits for ILI\(^2\). The previous week ending November 24th reported 2.3% influenza-like illness. See graph below displaying the comparison of statewide ILI activity to national ILI activity percentage.

---

1. Weekly ILI and lab data may change as additional reports are compiled.
2. Influenza-like Activity (ILI) is defined as Fever ($\geq 100°F$ [37.8°C], oral or equivalent) AND cough and/or sore throat in the absence of a KNOWN cause other than influenza.
By NMDOH regions within the state (refer to page 4 table footnote defining the regions by county), activity was at low to increased levels with a range of 0.8% ILI (Northeast Region) to 4.9% ILI (Southeast Region). See graph below for the current season’s ILI by region.

Sentinel outpatient reporting sites by region:
- **Northwest Region** of state: San Juan Regional Medical Center, Farmington; Acoma-Canoncito- Laguna Indian Health Service Hospital, Acoma; and Albuquerque Health Partners Urgent Care, Rio Rancho.
- **Northeast Region**: Raton Family Practice Associates, Raton; Taos-Picuris Indian Health Clinic, Taos; Pecos Valley Medical Center, Pecos; La Familia Medical Clinic, Santa Fe; Los Alamos Family Care Clinic, Los Alamos; Jicarilla Apache Indian Health Clinic, Dulce and Espanola Family Care Clinic, Espanola.
- **Metro Region**: Lovelace Downtown Medical Center and University of New Mexico Student Health Clinic, both in Albuquerque.
- **Southeast Region**: Carlsbad Medical Center, Carlsbad; Lea Regional Medical Center, Hobbs; Eastern New Mexico Medical Center, Roswell and Roosevelt General Hospital in Portales.
- **Southwest Region**: Gila Regional Medical Center, Silver City; Hidalgo Medical Services Clinic, Lordsburg; Ben Archer Health Center, Deming; Ben Archer Health Center, Dona Ana; La Clinica de Familia, Sunland Park; Ben Archer Health Center, Columbus; Mescalero Apache Indian Health Hospital, Mescalero; Sierra Vista Hospital, Truth or Consequences; Ruidoso Medical Associates, Ruidoso and the New Mexico Mining and Technology Institute, Socorro.
Laboratory tests for influenza: the Scientific Lab Division (SLD) has reported twenty positive samples for influenza by polymerase-chain reaction (PCR) testing, collected between 11/3/12 and 11/29/12. Six of the positive samples were influenza A (H3 subtype) and fourteen were influenza B type. These samples originated from McKinley, Lea, Lincoln, Dona Ana, Bernalillo, Santa Fe and Los Alamos counties.

Influenza-related deaths: there have been no reports of adult or pediatric deaths caused by lab-confirmed influenza in New Mexico since early October, the beginning of the 2012-2013 season.

NMDOH reported the state influenza activity as “Local” to the Centers for Disease Control and Prevention (CDC) due to the increased activity in the Southeast region of the state. See the table on page 3 for full definitions of activity levels. Below is a map of the U.S displaying New Mexico activity in comparison to influenza activity in bordering states, regions and nationally. This map is produced by the CDC Influenza Division.

*This map indicates geographic spread and does not measure the severity of influenza activity.

*Influenza-like illness: Fever (>100°F [37.8°C], oral or equivalent) and cough and/or sore throat (in the absence of a known cause other than influenza)
† Lab confirmed case = case confirmed by rapid diagnostic test, antigen detection, culture, or PCR. Care should be given when relying on results of point of care rapid diagnostic test kits during times when influenza is not circulating widely. The sensitivity and specificity of these tests vary and the predictive value positive may be low outside the time of peak influenza activity. Therefore, at the start of the season, NMDOH uses lab confirmation by PCR or culture to declare the presence of lab-confirmed influenza in the state. Positivity by other lab methods is recognized and tracked as another influenza activity indicator as the season progresses.
‡ Institution includes nursing home, hospital, prison, school, etc.
**Region: population under surveillance in a defined geographical subdivision of a state. A region could be comprised of 1 or more counties and would be based on each state's specific circumstances. In New Mexico, the NMDOH regions are: Northwest Region—San Juan, McKinley, and Cibola counties; Northeast Region—Los Alamos, Rio Arriba, Taos, Colfax, Union, Mora, Harding, Santa Fe, San Miguel and Guadalupe counties; Metro Region — Bernalillo, Sandoval, Torrance and Valencia counties; Southeast Region — Quay, Curry, DeBaca, Lincoln, Roosevelt, Chaves, Eddy and Lea counties, and Southwest Region — Socorro, Catron, Grant, Sierra, Otero, Dona Ana, Luna and Hidalgo counties.
