New Mexico Department of Health
Influenza & Respiratory Disease Report, 2018-2019

Summary of Activity: Week 47
November 18th– November 24th, 2018

- New Mexico influenza-like illness (ILI) activity is currently 1.3% of patient visits
- US ILI is 2.3%
- The national ILI baseline is 2.2%
- Influenza activity is above the NM ILI baseline of 2.4% in one of the five health regions
- No influenza outbreaks were reported this week

Influenza-Like Illness (ILI) Activity, 2014 to Present

New Mexico Department of Health (NMDOH) is collaborating with 23 ILI sentinel sites and 30 syndromic surveillance sites* for the 2018-2019 season. Sites report weekly on the number of patients that present to their facility with influenza-like illness (ILI). That number is then divided by the total number of patients seen for any reason, resulting in percent of ILI activity. ILI is defined as fever of greater than or equal to 100°F and cough and/or sore throat without a known cause other than influenza.

% ILI, NM, Week 47
November 18th– November 24th, 2018 (current week) 1.3%
% ILI, NM, Week 46
November 11th– November 17th, 2018 (previous week) 1.4%
% ILI, United States, Week 47
November 18th– November 24th, 2018 (current week) 2.3%

* See appendix for reporting sites
Regional Influenza-Like Illness (ILI) Activity, 2018-2019

Outbreak: An influenza outbreak is defined as at least two cases of ILI in a specific area with at least one laboratory confirmed case.

PCR Testing: Polymerase Chain Reaction (PCR) tests can identify the presence of influenza viral RNA in respiratory specimens. PCR testing is performed at various laboratories across New Mexico.
Since September 30th 2018, laboratories have reported that a total of 10 out of 2,093 respiratory specimens have tested positive for influenza by PCR. 5 specimen was subtyped as A(H1N1), 1 were A(H3N2), 4 influenza A specimens were not subtyped. For influenza B specimens, 0 specimens tested positive as influenza B not subtyped, 0 positive specimens were identified as B(Victoria) and 0 as B(Yamagata).

**Pneumonia death:** Is defined as having a cause of death that is related to pneumonia & influenza (P & I) not including: aspiration pneumonia, pneumonitis, or pneumococcal meningitis.

**Influenza death:** Is defined as having a cause of death that is related to pneumonia & influenza (P & I) not including: parainfluenzae or Haemophilus influenzae.

*Death data is delayed up to 8 weeks*
Influenza is a serious disease that can lead to hospitalization and sometimes even death. Every flu season is different, and influenza infection can affect people differently, but millions of people get the flu every year, hundreds of thousands of people are hospitalized and thousands or tens of thousands of people die from flu-related causes every year. Even healthy people can get very sick from the flu and spread it to others. Flu-related hospitalizations since 2010 ranged from 140,000 to 710,000, while flu-related deaths are estimated to have ranged from 12,000 to 56,000. During flu season, flu viruses circulate at higher levels in the U.S. population in the United States can begin as early as October and last as late as May. An annual seasonal flu vaccine is the best way to reduce your risk of getting sick with seasonal flu and spreading it to others. When more people get vaccinated against the flu, less flu can spread through that community.”

-Centers for Disease Control and Prevention

In accordance with New Mexico Administrative Code (NMAC) 7.4.3.13 **Influenza is a reportable condition for the following:**
- Influenza, laboratory confirmed hospitalizations only
- Influenza-associated pediatric death
- Acute Illness or condition of any type involving large numbers of persons in the same geographic area (outbreaks)
- Other illnesses or condition of public health significance (novel influenza A)

For more information on reportable conditions please visit:
http://164.64.110.134.parts/title07/07.004.0003.html
Found at the New Mexico State Records Center and Archives - Commission for Public Records

Report published by New Mexico Department of Health (NMDOH), Epidemiology and Response Division (ERD) Infectious Disease Epidemiology Bureau (IDEB)
For questions, please call 505-827-0006. For more information on influenza go to the NMDOH web page; https://nmhealth.org/about/erd/ideb/isp/Or The CDC web page: http://www.cdc.gov/flu/index.htm
