

Cannabis use in Pregnancy and Breastfeeding for a healthy baby from infancy to adulthood

Cannabis During Pregnancy

Researchers are still learning about the effects of cannabis during pregnancy. Studies show that cannabis (marijuana) use during pregnancy may be harmful to baby's health and can cause problems like:

-  Low birth weight
-  Poor brain development
-  Stillbirth
-  Preterm delivery

The chemicals in marijuana (in particular, tetrahydro-cannabinol or THC), pass through the placenta from your body into your baby's body.

Cannabis for Morning Sickness

There is no evidence that suggests cannabis is helpful for morning sickness. If you are experiencing morning sickness, talk with your medical provider about other options.

Cannabis while Nursing

Chemicals from cannabis can be passed to your baby through breast milk. Little is known about the effects of cannabis on breastfed babies. To limit the potential risks to your baby, cannabis use while nursing should be avoided.

Cannabis: Toddlers to Adulthood

Scientists are still learning about the effects of cannabis on a developing brain. Studies suggest that cannabis use by mothers during pregnancy impacts the child's attention, memory, problem-solving skills and behavior later in life. Learning or paying attention may be hard for the child as they grow.

Need Help?

Ask your health care provider for a referral to counseling or treatment.

Vapes and Edibles. The chemicals in any form of cannabis may be bad for your baby. This includes vapes and edible marijuana products, such as cookies, brownies, or candies.

Safely Storing Cannabis

As the popularity of edibles grows, it has become more common for kids to accidentally consume cannabis. Edibles are foods (usually baked goods or candy) that contain cannabis. They often look exactly like regular cookies, brownies, chocolate or gummies. If you keep cannabis edibles in your home, find a secure place to keep them.

Just like any drug, medication or household chemical, cannabis and edibles must be kept secure and out of reach. It is best to keep your cannabis in the original, child-resistant packing and locked in containers or cabinets.

Edibles

Toddlers and even children may not be able to distinguish between cannabis edibles and other sugary treats.

Cannabis use at home

for infants, toddlers, children, and all household members

Dangers of Cannabis Smoke

Smoke from cannabis has many of the same toxic and cancer-causing chemicals found in tobacco smoke and contains some of those chemicals in higher amounts.

Second-hand cannabis

smoke: Your infant inhales second-hand smoke containing THC and other harmful substances.

Third-hand cannabis smoke:

Your infant comes into contact with ash and other residues on clothing, furniture, bedding, and bath linens.

Get Help

If your child shows problems with breathing, sitting up, standing, or walking after deliberate or accidental exposure to marijuana, call 911 or go to an emergency room immediately.

Protect your child

- Don't use cannabis during pregnancy.
- If you do use cannabis, don't breastfeed your child until you've consulted with your doctor.
- Don't use cannabis while you are responsible for your child. Make sure someone sober is present.
- Do not sleep with your child if you have used cannabis.
- Keep all cannabis products locked up and away from children.
