Asthma is a common chronic lung disease affecting people of all ages and is characterized by episodic and reversible attacks or exacerbations of wheezing, breathlessness, chest tightness, and coughing. Asthma emergency department (ED) visits are notable indicators of poorly controlled asthma in a population, as asthma symptoms can be managed with proper education, clinical treatment, appropriate medication, and environmental management. Poor asthma control is associated with increased ED visits and significant medical costs. Patients who present to the ED may not have a primary care physician or primary care home, and thus are seeking care in the ED. Every year throughout the United States, 1 in 6 children with asthma visits the ED. This report summarizes trends in asthma-related ED visits in New Mexico.

In 2019, 2,014 children (rate of 42.2 per 10,000) and 4,112 adults (rate of 25.4 per 10,000) went to the ED due to their asthma. Rates are about twice as high among children compared to adults. Since 2010, childhood and adult asthma-related ED rates have decreased by 27% and 11%, respectively.
ASTHMA-RELATED ED VISIT RATES BY MONTH

In New Mexico, asthma-related ED visits are highest in the spring months (February, March, and April) and the lowest during the summer months (June and July). The highest rates are among children.

NM ASTHMA-RELATED ED VISIT RATES BY AGE AND GENDER

Boys, ages 0-14 years old have the highest asthma-related ED visit rates. ED visit rates decline as males get older. Females experience consistent asthma-related ED visit rates from around 5 years old through age 50. Rates are higher among females compared to males starting in the mid-teenage years.

Clearing the Air | A Quarterly New Mexico Asthma Data Report
The highest asthma-related ED visit rates are in the Southeast (SE) and Northwest (NW) health regions. Since 2015, there has been a 44% decrease in asthma-related ED visit rates in the SE. The NW region has not experienced as dramatic of a decline (15%), and the Metro health region has seen a general increase over the past 4 years. Over the past 5 years, the counties with highest rates are Chaves, Curry, Eddy, Grant, Quay, and Sierra.
